Introduction 1

1 Stages in the development of a business and financial model 4

Scope 4

The fundamental question 5

A step-by-step approach 8

Skills required 10

Planning the model 11

Data quality 14

Tools 15

Summary 15

2 Developing the research question and output definition 17

The basic question 17

Output definitions, examples, financial outputs 19

Summary 26

3 Visual thinking to develop fundamental questions

Contributed by John Caswell
and Sarah Gall 27

Challenging the traditional business model 28

New methods and approaches – a business model reflecting
the world as it is today 28

Structured Visual Thinking (a trademark of Group Partners):
principles for a dynamic world 29

An architectural approach to building a future 34

4D™ approach 37

Summary 41

4 Input definition 43

Basics of input definition 43

Important variables 46

Summary 47

5 Scenario identification 48

Determining scenarios 48

Populating the spreadsheet with input values and formulae 50

Running different scenarios 51

Using Excel Scenario Manager for what-if analysis 52

Scenarios versus projections 53

Summary 53

6 Building a simple model 55

Process 55

Example 56

Data extraction using Excel pivot tables 62

Some reminders of best practice 63

Reasons for failure of a model and how to avoid them 64

Summary 66

7 Using charts 67

Excel charts 67

Using charts to help concentrate on the most important
variables in an organization 71

Charts for break-even analysis 73

Chart tools 76

Presenting data and charts to communicate clearly 76

Using Excel pivot charts to show extracted data 78

Summary 79

8 Modelling budgets 80

Planning and budgeting 80

Departmental budgets and variance analysis 82

Some key departmental budgets 87

Capital budgets 97

Summary 104

- 9 Sales budgets** 105
- Sales budgets and forecasts are key to other budgets 105
 - Elements of a sales budget 106
 - Volume assumptions 107
 - Summary 122
- 10 Production – material, labour and direct overhead budgets** 123
- Production budget 123
 - Direct materials budget 125
 - Direct labour budget 126
 - Direct overhead budget 127
 - Gross margin and profit budget 128
 - Margin and profit sensitivity 129
 - Departmental budget spreadsheet 130
 - Summary 132
- 11 Fixed assets and depreciation** 133
- Accounting depreciation, straight line and reducing balance 134
 - Additions and disposals of assets 137
 - Tax depreciation (capital allowances in the UK) 138
 - Summary 139
- 12 Managing and modelling cash flow and working capital** 140
- The cash flow cycle 140
 - Working capital ratio 142
 - Optimal stock levels 143
 - Debtors 150
 - Cash models 151
 - Cash budget 153
 - Summary 155
- 13 Investment appraisal models** 156
- Relevant cash flow 156
 - Pay-back period 158

Return on capital 160
Accounting rate of return (ARR) 162
Discounted cash flow and net present value/internal rate of
return 163
Capital rationing 170
Summary 172

14 The cost of capital 173

The average and the marginal costs of capital 174
Balancing equity and external borrowing 176
Risk and the cost of capital 177
Methods of determining the cost of equity 178
Significance of the cost of capital 179
Summary 180

15 Business valuation models 181

The value of a business and building value 181
Methods of valuing a business 183
Who can value a business and what information do they
require? 186
Examples of valuation methods and their appropriateness to
valuation reasons 187
Earnings-based valuations 190
Cash flow valuation models 191
Discounted cash flow (DCF) method of valuation 192
Summary 193

16 Performance indicators 195

Dashboards 195
Key performance indicators 197
The integrated standard costing system 200
Activity-based costing (ABC) 208
Summary 209

17 Modelling the company balance sheet, P&L and ratio analysis 210

Prepare an Excel model 210
Analysis and financial ratios 214

Ratio analysis 216

Summary 225

18 Financial functions 227

Financial formulae and using Excel *fx* functions 227

Excel financial functions 230

Summary 232

19 Building a business model 233

Modelling a start-up business 233

Opening balance sheet 237

Expected returns for risk – proprietors' pay, bank interest 237

Forecast profit and loss statement and sales requirement 238

Required marketing and selling activity 239

Direct costs required 240

Building a model 240

Key indicators 242

Business plan 245

Summary 248

20 Modelling projects 249

What is a project? 249

Critical path analysis (CPA) 250

CPA example 250

Risk and uncertainty 253

Gantt charts and resource planning 254

Modelling projects using Excel 255

Summary 256

21 Integration, complexity and business models 257

The level of integration required 257

Data and systems integration 259

Cloud computing 259

Summary 260

22 Business models for the green economy 261

Future challenges and opportunities 261

Production processes 261

Demand for greener products and services 262

Investor expectations 262

Resourcing 263

Effects of climate change and other factors 263

Supply chains 264

Social responsibility 264

Changing models 264

Modelling green issues 265

Summary 266

Appendix 1 Excel shortcut commands 267

Appendix 2 Chart for business model build project 274

Appendix 3 Discounted cash flow tables 276

Index 278
