

CONTENTS

Preface xi

01 Who should read this book and why? 1

- What we cover in this book 1
- What can you expect in this book? 3
- Data versus information 6
- What is important? 8
- The methods we will be discussing 10
- Implicit views of people and biases 11
- One way of comparing these methods 13
- Sense and sensibility with predictions 15
- Where we will not be going 20
- Summary of key points 21

02 Getting the project going 27

- At the beginning 27
- Know who you are talking about or talking to 28
- What is the most you can expect from each method? 31
- How do you judge the result? 35
- What is significant? 36
- On to correlations 43
- How do I plan to evaluate the results? 45
- Know what sensible goals might look like 50
- Summary of key points 51

03 Conjoint, discrete choice and other trade-offs: let's do an experiment 55

- The reasons we need these methods 55
- The basic thinking behind the experimentally designed methods 59
- What the methods ask – and get 60
- What is a designed experiment? 66
- The great measurement power of experiments 70
- Getting more from experiments: HB to the rescue 71

A brief talk about origins 74
Applications in brief 78
Summary of key points 80

04 Creating the best, newest thing: discrete choice modelling 85

Key features 85
Thinking through and setting up the problem 90
How many people you need 103
Utility and share 105
Market simulations 107
Making more than one choice: allocating purchases 114
Using the simulator program in the online resources 114
Rounding out the picture 118
Summary of key points 120

05 Conjoint analysis and its uses 127

Thinking in conjoint versus thinking in choices 127
Conjoint analysis for single-product optimization 132
Using the single product simulator in the online resources 133
Conjoint remains an excellent method for messages 136
Conjoint analysis for the best service delivery 147
Using the message optimization simulator in the online resources 152
Conjoint analysis and interactions 154
Variants of conjoint analysis 156
Summary of key points 159

06 Predictive models: via classifications that grow on trees 165

Classification trees: understanding an amazing analytical method 165
Seeing how trees work, step by step 166
Strong, yet weak 173
A case study: let's take a cruise 174
CHAID and CART (and CRT, C&RT, QUEST, J48 and others) 191
Summary: applications and cautions 194

07 Remarkable predictive models with Bayes Nets 197

What are Bayes Nets and how do they compare with other methods? 197

Let's make a deal 205

Our first example: Bayes Nets linking survey questions and behaviour 213

Bayes Nets confirm a theoretical model, mostly 218

What is important to buyers of children's apparel 223

Summary and conclusions 226

08 Putting it together: what to use when 229

The tasks the methods do 230

Thinking about thinking 235

Bibliography 237

Index 249

**Bonus online-only materials are available
at the following url:**

www.koganpage.com/AI-Marketing

- Bonus online-only Chapter 1: Finishing experiments and on to the non-experimental world
- Bonus online-only Chapter 2: Artificial intelligence, ensembles and neural nets
- Online-only Simulators: three different simulators in Excel format, one in PowerPoint format and one in PDF (Adobe Acrobat) format, allowing you to interactively optimize products and messages. (You will need Flash Player installed on your computer for the PowerPoint format and PDF (Adobe Acrobat) format simulators to work.)
