01 Evidence-based management, the basic principles (with Rob Briner) 1

What is evidence-based management?	2
What counts as evidence?	3
Why do we need evidence-based management?	3
What sources of evidence should be considered?	5
Why do we have to critically appraise evidence?	11
Why focus on the 'best available' evidence?	12
Some common misconceptions about evidence-based management	13
What is the evidence for evidence-based management?	16
Notes and references	17

02 ASK: Critical questions about assumed problems and preferred solutions 20

Identifying underlying assumptions	21
Starting point: What is the problem to solve or opportunity to address?	23
PICOC	24
Step 1: What is the assumed problem to be solved?	26
Step 2: What is the evidence for the problem?	30
Step 3: What is the preferred solution?	33
Step 4: What is the evidence for the preferred solution?	38
Developing your capacity to ask questions	42
Checklists	43
Notes and references	48

PART ONE Evidence from Practitioners 49

03 ACQUIRE: Evidence from practitioners 51

What to ask? 51

Whom to ask? 53

How many practitioners should I ask? 53

How to ask? 55

Developing questions 57

Notes and references 60

04 APPRAISE: Evidence from practitioners 61

How to tell whether a practitioner has professional expertise 62

Why is it so hard to develop valid and reliable professional expertise? 64

Two modes of thinking 65

Cognitive biases 68

Avoiding or reducing bias 76

Critical appraisal of evidence from practitioners 80

Checklist 84

Notes and references 85

PART TWO Evidence from the Scientific Literature 87

05 A short introduction to science (with Rob Briner) 89

What is science? 89

Science is not about 'truth' or 'proof' 93

Coincidence 94

Bias 96

Confounders 98

The placebo effect 99

Moderators and mediators 100

Qualitative versus quantitative research 101

Research designs 103

How to read a research article 108

Notes and references 109

06	ACQUIRE: Evidence from the scientific literature	112
	The scientific literature	113
	Step 1: Determining your search terms	116
	Searching in research databases: Some basic search techniques	120
	Pre-testing your search terms	123
	Searching for empirical studies: Systematic, transparent and reproducible	125
	Finally, some tips	136
07	APPRAISE: Evidence from the scientific literature (with Rob Briner)	139
	Critical appraisal: Three preliminary questions	140
	Critical appraisal: Methodological appropriateness	145
	Methodological appropriateness: Cause-and-effect studies	146
	Methodological appropriateness: Non-effect studies	153
	Critical appraisal: Methodological quality	159
	Finally: The ‘best available’ evidence	167
	Overview of the appraisal process	170
	Checklists	171
	Notes and references	173
	PART THREE Evidence from the Organization	175
08	ACQUIRE: Evidence from the organization (with Martin Walker)	177
	Why is evidence from the organization important?	178
	Organizational evidence from data to information and evidence	179
	What questions to ASK?	180
	What types of organizational evidence are typically available?	181
	Big data	183
	Where to find organizational evidence	184
	Techniques and tools for acquiring data	187
	Organizational data turned into information	188
	Other considerations when acquiring data	193
	Notes and references	195

09 APPRAISE: Evidence from the organization (with Martin Walker) 196

- Barrier 1: Absence of a logic model 197
- Barrier 2: Irrelevant data 199
- Barrier 3: Inaccurate data 201
- Barrier 4: Missing contextual information 203
- Barrier 5: Measurement error 204
- Barrier 6: The small number problem 205
- Barrier 7: Confusing percentages and averages 206
- Barrier 8: Misleading graphs 210
- Barrier 9: Correlations and regressions – overfitting the data 214
- Barrier 10: Wide confidence intervals 219
- Artificial intelligence, machine learning and artificial neural networks 220
- Organizational evidence: quality versus purpose 221
- Checklist 222
- Notes and references 223

PART FOUR Evidence from Stakeholders 225

10 ACQUIRE: Evidence from stakeholders 227

- Not all evidence from stakeholders is stakeholder evidence 228
- Types of stakeholder 230
- Who are the most relevant stakeholders? 231
- Whom to ask? 234
- What to ask? 235
- How to ask? 237
- Notes and references 240

11 APPRAISE: Evidence from stakeholders 242

- The importance of subjective feelings and perceptions 243
- What is the impact of the decision? 243
- Representativeness 244
- How representative is my sample? 245
- Checklist 247
- Notes and references 247

- 12 AGGREGATE: Weighing and pulling together the evidence** 248
- Evidence-based management is about probabilities 250
 - Bayes' Rule 252
 - The prior probability 254
 - The likelihood of the evidence 255
 - Updating the posterior probability when new evidence becomes available 258
 - Using Bayes' Rule to aggregate evidence from different sources 260
 - Bayesian thinking 265
 - Notes and references 268
- 13 APPLY: Incorporating the evidence into the decision-making process_(with Alessandra Capezio)** 270
- Does the evidence apply? 271
 - What is the expected value? 272
 - Is it the biggest bang for your buck? 274
 - Is the level of risk acceptable? 274
 - Are there ethical issues to consider? 276
 - Is the evidence actionable? 277
 - Are there moderators that you need to take into account? 280
 - How and in what form can you apply the evidence? 281
 - Dissemination, implementation and change 284
 - Notes and references 287
- 14 ASSESS: Evaluate the outcome of the decision taken** 289
- Types of decisions 290
 - Assessing the outcome: Two preliminary questions 291
 - Assess: The gold standard 293
 - Assess: The silver standard 298
 - Outcome measures 302
 - Assessing stakeholder effects 303
 - Keep it simple! 304
 - Notes and references 306

15 Building the capacity for evidence-based management 308

Becoming an evidence-based manager 309

Building evidence-based capacity among bosses and peers 312

Building evidence-based capacity in your organization 316

Some final words 319

Notes and references 320

Appendix 323
