Trademarks and usage xxi

Introduction 1

PART ONE World of understanding – overview 7

- 01 The impact of low participant engagement in market research** 11
Eight side effects of low participant engagement 12
Notes 15
- 02 The surprising similarities between digital games and online surveys** 17
How users control and manipulate worlds 20
Projective techniques, characters and avatars 21
Using the similarities to rethink research participation:
research-games as ‘entertainment snacks’ 24
Notes 25
- 03 Debunking common misconceptions in market research about games and gamification** 27
Misconception 1: changing the wording of questions alone
gamifies a survey 27
Misconception 2: games and gamification for research are just for
children 29
Misconception 3: games are about using bright colours 29
Misconception 4: games are about using fancy graphics 30
Misconception 5: game-based research is primarily about making
research fun 31

- Misconception 6: games are primarily for male audiences 32
- Misconception 7: drag and drop functions make surveys gamified 32
- Misconception 8: gamification is just a fad 33
- Misconception 9: gamification is a quick fix for low engagement 33
- Misconception 10: game-based research is just for research with gamers 34
- Misconception 11: participants will focus on the ‘game’ part and not the ‘survey’ part 35
- Misconception 12: I’m not creative so I can’t design research-games or gamified surveys 35
- Misconception 13: participants will find a way to cheat if the survey is a game 36
- Misconception 14: the inclusion of a *single* game mechanic (like a goal or a rite) makes anything into a game, even a survey 37
- Misconception 15: game-based research is really expensive 37
- Misconception 16: using game-based research requires a change in survey software 40
- Notes 40

04 Games and gamification: exploring definitions and why games are so engaging 42

- Defining and understanding games, and exploring what makes games so engaging 43
- Why are games so engaging? How games satisfy our psychological needs 46
- The science behind what happens when our psychological needs are satisfied and why this should matter to researchers 50
- Game components – ‘CABIN’ 51
- Game elements – ‘ATARE’ 59
- Defining and understanding gamification 70
- Activity 72
- Notes 72

05 The differences and similarities between games and gamification 77

- Win/lose states 77
- Intrinsic engagement versus extrinsic engagement 78
- Play versus taking part 79
- The design processes 79

The outcomes in terms of user data and behaviour 81
The similarities between serious games and gamification: from
engagement to applying the four ‘game values’ 82
Learning from four game values: inspiring participants for
higher response rates and perpetuating engagement for higher
completion rates 82
Activity 90
Notes 90

06 An ontology of game-based research methods: defining research-games, gamified research and surveytainment 92

Definitions of game-based research methods in the market research
industry so far 93
Defining game-based research methods (GbRM) 94
How do I know if I’ve created a research-game, gamified my
research or created surveytainment? 100
When to use research-games, gamified surveys and
surveytainment 101
Notes 102

07 The scientific foundation for using game-based research methods: the six vital states and their benefit to market research 103

Introducing the six vital states for increasing response rates,
completion rates and data quality 104
The six vital states in detail 106
How can personalization be used in game-based research to
amplify participant engagement and data quality? 117
Notes 118

08 Game culture: a showcase of intrinsic engagement to help market researchers 120

Game culture 122
Intrinsic engagement in games and what it can do for market
research 123
Actions of the intrinsically engaged: towards participant creativity
and collaboration using games 125
Activity 145
Notes 145

- 09 How games and gamification are used for engagement and data collection outside of research and entertainment 148**
- Why brands use playful approaches 149
 - Functional Games 151
 - Where games and data collection blur lines: the case of *Miitomo* and how games are already using research techniques to find out more about people 155
 - What about gamification? Exploring how gamification is used to create playful experiences 157
 - Activities 159
 - Notes 160
- 10 The Triple E Effect: games as engaging, emotive and experiential simulations for research and insight 163**
- Four reasons why evoking emotive experiences is important in market research 163
 - The benefits of the Triple E Effect 165
 - Emotive experiences 165
 - Exploring text-adventure games: harnessing experience and emotion with simple graphics and/or just text on a screen 169
 - A text-based research-game example 171
 - Simple ‘story games’: visual but narrative-led and text-based simulations 172
 - Replaying simulations in ‘alternate realities’ to understand context effect and develop predictive models 173
 - Five places to start on creating emotive, experiential simulations in game-based surveys 175
 - Notes 177
- 11 Case studies and results from game-based research 179**
- Limitations of case studies on game-based research methods (GbRM) 179
 - Opportunities of case studies on game-based research methods 181
 - What we know: benefits of using game-based research methods 181
 - Case studies from Research Through Gaming Ltd 184
 - Notes 203

- 12 Five things to consider before using games and gamification for market research 206**
The strengths and limitations of existing survey software 206
Is it worth your time and effort? 207
What project do I start with? 208
Your design approach will be completely different from someone else's 208
How creative can I be? 209

PART TWO World of design – overview 211

- 13 Fifteen ethics guidelines for designing and making game-based surveys 213**
Notes 223
- 14 A vocabulary of play for game-based research: game terminologies and inspiration 224**
Terminology 225
Evolving your vocabulary of play 227
Activities 229
Notes 230
- 15 Game-based research design: ten tips for building the right foundations 231**
Ten common-sense tips for good game-based survey design 232
Recommended reading 238
Notes 239
- 16 Introducing Smart Intuition and Meaningful Creativity (SIMC) 240**
What is SIMC? 240
SIMC in action 244
Ways to support and improve Smart Intuition 245
Activities 248
Notes 249
- 17 Overcome these four concerns about game-based survey design 251**
'I'm bad at drawing' 251
'Design ideas are slow to surface' 251

‘Someone else has a different game-based design approach to the same research project’ 253

‘I got the design wrong’ 253

Note 253

18 Design your game-based research: play ‘20 for 20’ 254

Why play a game to design a research-game or gamified survey? 255

Before you play 20 for 20: four steps 255

How to play the 20 for 20 game: design your game-based survey through play 259

Advantages and drawbacks 264

Activities 266

Notes 267

PART THREE World of making – overview 269

19 Stakeholder onboarding and preparing to build your game-based survey design 271

Preparing the materials you need for build mode, and for client and team onboarding: your DPS 271

You’ve prepared these materials, now what? 275

20 Custom-made versus ready-made game-based surveys: differences, benefits and drawbacks 276

Exploring the tailor-made approach 276

Exploring the ready-made approach 278

Exploring the middle ground building re-useable game-based survey architecture 279

Activity 280

Notes 280

21 Build mode: create, playtest, maintain and launch your game-based survey 281

Finding a good graphic designer, or becoming a graphic designer 282

Finding a team of programmers, or learning how to code yourself 282

You've got your dream team together – now what? 283
Activities 284

22 Analysing the quality of game-based research designs 285

What constitutes design weaknesses and how to detect them 286
Five key learnings to improve game-based survey designs 295

PART FOUR A new market research world – overview 297

23 Building a career in game-based research 299

How to develop a career in game-based methods – five tips 300
Future careers in and/or related to game-based research
 methods 305
Summary 308
Activities 309
Notes 309

24 The future of game-based research 310

Artificial intelligence and game-based research 312
Virtual reality and game-based research 315
Augmented reality and game-based research 317
Motion sensing and motion capture (mocap) technology, and AI,
 automation and game-based research 319
Further predictions on the future of game-based research and
 market research in general 321
Notes 323

Final words 326

Index 327
