Introduction 1

PART I New Thinking and Business

Models 7

- 01 Profit, people and planet – the triple advantage 9**
Routes to supply chain sustainability 9
Why is ‘sustainability’ important in supply chains? 12
‘Triple advantage’ in the supply chain sector 14
Summary 25
Key points 25
References 26
- 02 Supply chains in the ‘circular economy’ 29**
What is a ‘circular supply chain’? 29
The secondary materials market 36
Building product design into the supply chain 40
Summary 42
Key points 43
References 43
- 03 The role of supply chain technologies 45**
Transport management systems (TMS) 47
Alternative fuels 49
The ‘Internet of Things’ and telematics 53
Autonomous vehicles 54
Unmanned aerial vehicles (UAVS) 56
Using technology to create supply chain visibility for societal impact 58
Summary 59
Key points 60
References 60

- 04 Sustainable supply chains survey 61**
Importance to corporate strategy 62
The main pressures driving logistics policies 64
The main benefits of implementing a sustainable supply chain and logistics strategy 65
Effectiveness of formal environmental policies 67
Measurement of impact on the environment 68
Environmental impact and suppliers 69
The importance of sustainability to business activities 71
Future commitment to the environment 72
Summary 73
Key points 74
References 74

PART II Public Policy and Industry Response 75

- 05 Government policy and industry response to climate change 77**
COP21 intergovernmental summit 78
EU environmental policy 81
US environmental policy 84
Logistics' impact on the environment 85
Summary 97
Key points 97
References 98
- 06 Implementing a CSR strategy 99**
The business case behind CSR 99
CSR policies and practice 101
CSR: whose responsibility? 107
Environmental Management Systems 111
Ethical investors 115
Sustainability: a growing factor in tenders 117
Humanitarian logistics 119

- Summary 121
- Key points 121
- References 122

- 07 Sustainable warehousing and distribution 123**
 - Land use 125
 - Certification of sustainability and government incentives 126
 - Improving sustainable operations in the warehouse 129
 - Return on investment of green projects 133
 - Green energy opportunities 136
 - Warehouse operations best practice case studies 136
 - Summary 140
 - Key points 140
 - References and further reading 141

- 08 Sustainable packaging initiatives 143**
 - Solutions for the reduction of packaging 146
 - Packaging of goods for e-retail 146
 - Refillable packaging – pros and cons 148
 - Reusable packaging schemes 152
 - Lifecycle assessment 157
 - Summary 161
 - Key points 162
 - References 162

- 09 Global or local? The ethical debate 165**
 - Re-shoring: the political dimension 167
 - Local sourcing: the supply chain trend of the future 171
 - TTIP: the ethical dimension 174
 - Trade-off in environmental and ethical decision making 181
 - Summary 185
 - Key points 186
 - References 186

PART III Ethical Issues in the Supply Chain 189

- 10 Societal and environmental supply chain responsibility 191**
Setting the standard for suppliers 192
Sustainability throughout the supply chain 194
'Conflict-free' minerals 208
Summary 217
Key points 218
References 218
- 11 Ethics in the supply chain: societal impact 221**
Supply chain audits 224
Modern slavery legislation 227
Employee conditions in the fashion industry 231
Labour issues in the high-tech sector 236
International retail supply chains in fruit and vegetables 238
Mitigating risk through 'compliance' 241
Conclusion 243
Summary 244
Key points 244
References 245
- 12 Ethical supplier relationships 247**
Use and abuse of supply chain power 248
Milk: how ethical are supermarkets' supply chains? 252
Corruption in supply chain relationships 256
Summary 259
Key points 260
References 260

13	Treatment of workers in the modern logistics sector	261
	The increasing use of owner-drivers	262
	The on-demand economy – unethical or new employment model?	266
	Ethical work practices in the warehouse	267
	Summary	270
	Key points	270
	References	271
