## **01 The modern competitive landscape: The pursuit of higher value added through excellence in manufacturing 1**

Introduction 1

The money-making ecosystem 4

Cash flow is fundamental to manufacturing excellence 7

Concepts of manufacturing excellence 10

The management of quality as a competitive priority 14

Value-adding and the cash flow cycle 18

Key lessons of manufacturing excellence 18

In summary 23

Further reading 24

Notes 25

## **02 A history of manufacturing systems excellence 27**

Introduction 27

Modes of manufacturing 28

The history of manufacturing 28

Craft production and individual expertise 28

Mass production and the management prerogative 34

The process-based approaches to manufacturing 39

A question of fit 61

In summary 62

Further reading 63

Notes 63

## **03 Understanding the context for manufacturing excellence 65**

Introduction 65

Learning outcomes 65

The four basic Vs 67

|                                                            |    |
|------------------------------------------------------------|----|
| Variety and mix of products that the technology can output | 69 |
| Adding two more Vs to the feasible manufacturing solution  | 72 |
| Adding more Vs                                             | 74 |
| A systems approach to manufacturing and protective buffers | 77 |
| Not low, not high – just medium really!                    | 80 |
| In summary                                                 | 81 |
| Further reading                                            | 82 |
| Notes                                                      | 82 |

## **04 Measures of flow for operational excellence 83**

|                                                                                          |     |
|------------------------------------------------------------------------------------------|-----|
| Introduction                                                                             | 83  |
| The fragile manufacturer and supply chain                                                | 87  |
| Strategies for gaining flow                                                              | 90  |
| Gaining flow through effective industrial engineering                                    | 93  |
| Problems and inhibitors to flow after initial product designs and industrial engineering | 96  |
| Typical measures of flow                                                                 | 98  |
| Overall flow effectiveness                                                               | 105 |
| In summary                                                                               | 107 |
| Notes                                                                                    | 108 |

## **05 Mapping processes for manufacturing excellence 110**

|                             |     |
|-----------------------------|-----|
| Introduction                | 110 |
| Learning outcomes           | 111 |
| The benefits of mapping     | 111 |
| Types of map                | 112 |
| Levels of mapping           | 114 |
| Mapping within the factory  | 116 |
| Shifting the burden         | 143 |
| The value of combining maps | 145 |
| In summary                  | 146 |
| Notes                       | 148 |

## **06 High-performance and high-reliability manufacturing 150**

|                                                        |     |
|--------------------------------------------------------|-----|
| Introduction                                           | 150 |
| Systems theory                                         | 151 |
| Operations and manufacturing strategy                  | 152 |
| Communication system                                   | 157 |
| Strategy, planning, and short-term information sharing | 159 |

|                                     |     |
|-------------------------------------|-----|
| The technical system                | 159 |
| The social system                   | 161 |
| Learning and improvement system     | 162 |
| The supply chain relationships      | 163 |
| Systems of manufacturing excellence | 164 |
| In summary                          | 165 |
| Notes                               | 167 |

## **07 Operations strategy, policy deployment and the learning organization 168**

|                                                                       |     |
|-----------------------------------------------------------------------|-----|
| Introduction                                                          | 168 |
| The old approach to manufacturing strategy and deployment of policies | 170 |
| Hoshin Kanri/policy deployment                                        | 172 |
| Step-by-step policy deployment                                        | 176 |
| The × chart matrix                                                    | 180 |
| The A3 project chart                                                  | 185 |
| In summary                                                            | 188 |
| Further reading                                                       | 190 |
| Notes                                                                 | 191 |

## **08 Social systems and continuous improvement 193**

|                                                        |     |
|--------------------------------------------------------|-----|
| Introduction                                           | 193 |
| The human side of the manufacturing excellence company | 194 |
| The value of roles                                     | 199 |
| The new HR approach                                    | 202 |
| Teams and improvement                                  | 206 |
| The impact of human error                              | 211 |
| In summary                                             | 213 |
| Notes                                                  | 214 |

## **09 The technical delivery and material flow subsystem 216**

|                                                             |     |
|-------------------------------------------------------------|-----|
| Introduction                                                | 216 |
| The first set of decisions: From product to process routing | 218 |
| The key decisions of the onion                              | 222 |
| Designing the actual operations and daily flow of product   | 230 |
| Workplace discipline and control                            | 232 |
| Visual management                                           | 235 |
| In summary                                                  | 243 |
| Notes                                                       | 246 |

## **10 System reliability and protecting flow 247**

Introduction 247

Maintenance management: A neglected capability 250

Maintenance strategies 255

The consequence of catastrophe 257

Value and role 260

TPM: Goals and improvement approaches 267

Industry 4.0 and maintenance 268

The 'lights out' factory 269

In summary 271

Further reading 273

Notes 273

## **11 Supply chain coupling 275**

Introduction 275

Suppliers: From hated adversary to trusted partner 277

What is the supply chain? 280

Relationships with suppliers 282

The cost of developing suppliers 285

Measuring supplier performance 286

Keeping materials moving 288

The smart factory 290

Single supplier integration and learning 292

In summary 296

Notes 298

## **12 Conclusions and final thoughts 300**

Reinventing the organization 304

Economic viability and environmental sustainability 305

The modern socio-technical system 306

Closing comment 308
